

**SC Carts Granted Approval as a Canadian Low Speed Vehicle Manufacture**  
*Custom electric small vehicle manufacture takes it to the NXT level*

**Vernon, BC Canada:**

Today, Simolo Customs Ltd. dba SC Carts, a custom electric small vehicle manufacture announced that they were granted approval by Transport Canada as an LSV (low speed vehicle) manufacture for their line of NXT electric vehicles. This is an industry first in Canada and has been 5 years in the making for the company.

Of the company's recent accomplishment, SC Carts CEO Jeffery Holomis said, "this has been a project we have had on our radar for over 5yrs and was not easily achieved. We are extremely excited as a company to be recognized as an LSV manufacture in Canada and look forward to the future opportunities that it brings to our industry both locally and globally"

LSV's have been widely used throughout the world for years especially in the USA, but there has not been a vehicle of this type that has met the LSV requirements in Canada up until now. With the NXT being electric and more compact than your typical vehicle it not only plays into the green aspect but also offers benefits from a congestion standpoint as well.
